

Geant4 simulation on scintillator bars array (Setup as Dec2014 beam test in Notre Dame)

Junhui LIAO, University of Zürich
(Based in Fermilab since Mar 2014)

October 10, 2014

Outline

- 1 Introduction on setup
- 2 Preliminary results of "SDD + 22 scintillator bars "
- 3 Hit position analysis

Setup of 22 scintillator bars

Scintillator bars , view from different angles.

Deposited(recoiled) energies in SDD with a cut

Beam information : shape is rectangle; size : same as the one view from the direction of incident neutron.

Cut : a hit in SDD and any of 22 bars.

All bars : SDD deposited energy vs time hit in Bars

X,Y coordinates of hits in all 22 bars with SDDE cut of (1,3)keV

X,Y coordinates of hits in all 22 bars with SDDE cut of (6,8)keV

X,Y coordinates of hits in all 22 bars with SDDE cut of (16,18)keV

X,Y coordinates of hits in all 22 bars with SDDE cut of (26,28)keV
